

# Torch

`torch.index_select()`

`torch.tensor.detach().cpu().numpy()`

- `device = torch.device('cuda' if torch.cuda.is_available() else 'cpu')`

gradient clipping simple solution to gradient explosion, works well practically

- `torch.nn.utils.clipgrad_norm(parameters, max_norm, norm_type=2)`
  - example: `torch.nn.utils.clipgrad_norm(retinanet.parameters(), 0.1)`
