

Regex

1. parentheses vs brackets
 1. parentheses: () defines a capturing group, so we can think of it like a word.
 2. brackets: [] defines a character set, so any character set can be matched.
2. positive look behind: ?<=
 1. /(?!<=[tT]he)/g
3. negative look behind: ?>!
 1. /(?!<![tT]he)/g
4. positive look forward
 1. /(?!at)/g -> get any character that is followed by 'at'
5. negative look forward
 1. /(?!at)/g
6. \w matches any word character (alphanumeric and underscore)
7. \d matches any digit character (0-9)
8. tweet cleaning and tokenization
 1. learn regex from regexr.com.

```
tokens = re.sub(r'([^\s\w]|_)+', ' ', sentence).split()
```
